

# gEEK® spEEk

## Mechanics of Running COM

Richard Mellitz

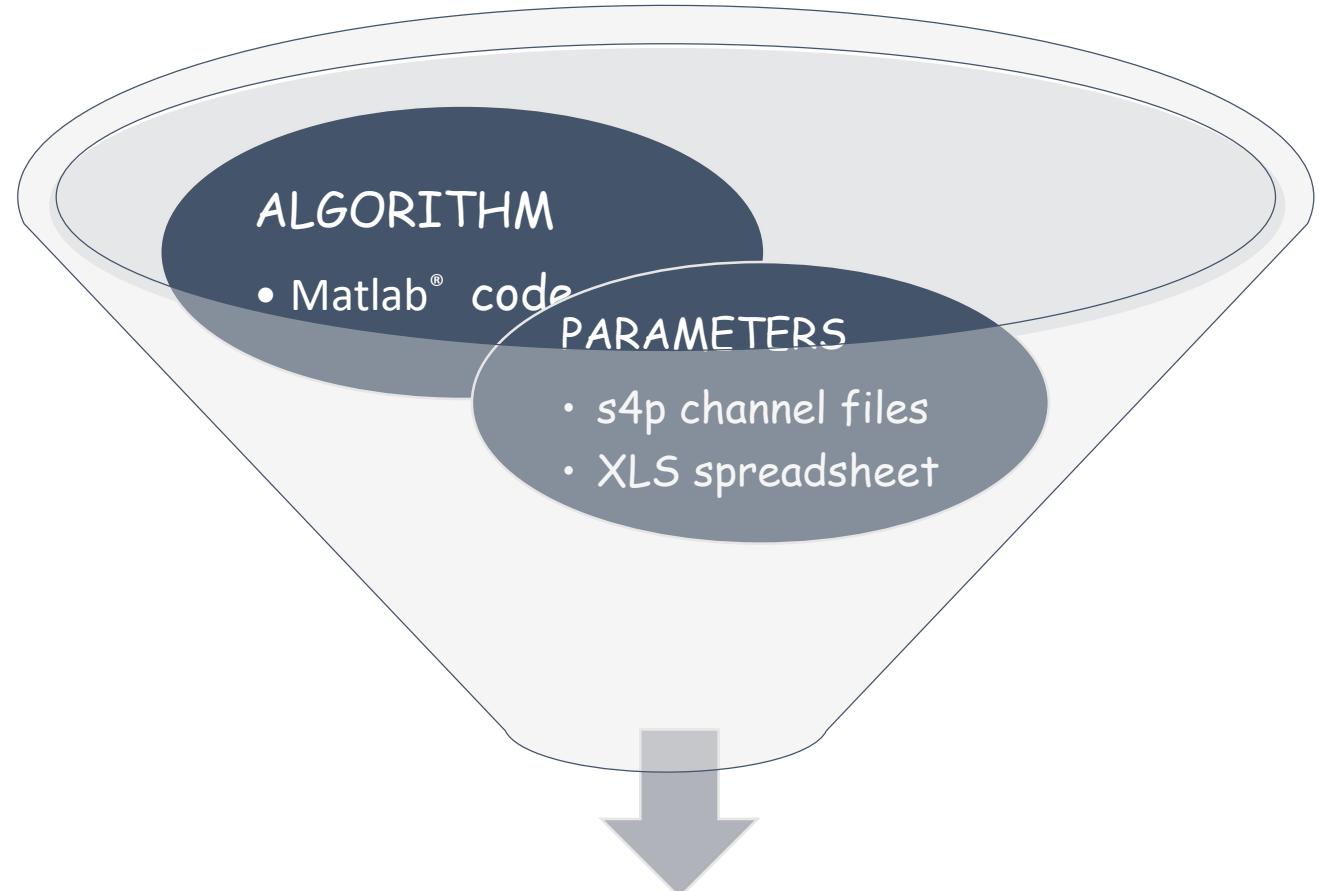

# Agenda

- COM: “Hello World”<sup>1</sup>
- What you need to get started
- A few early configuration examples
  - 25 G NRZ/PAM4
- Packages
- Latest COM script examples
  - 100 G PAM4
- Using the COM compute to compute ERL only
- Touch on Advanced Topic
  - ERL for test point V
- Not in this presentation
  - COM concepts
  - Transmitter testing
  - Passing parameter into COM

<sup>1</sup> Kernighan, Brian W.; Ritchie, Dennis M. (February 1978). *The C Programming Language* (1st ed.). Englewood Cliffs, NJ: Prentice Hall. ISBN 0-13-110163-3.

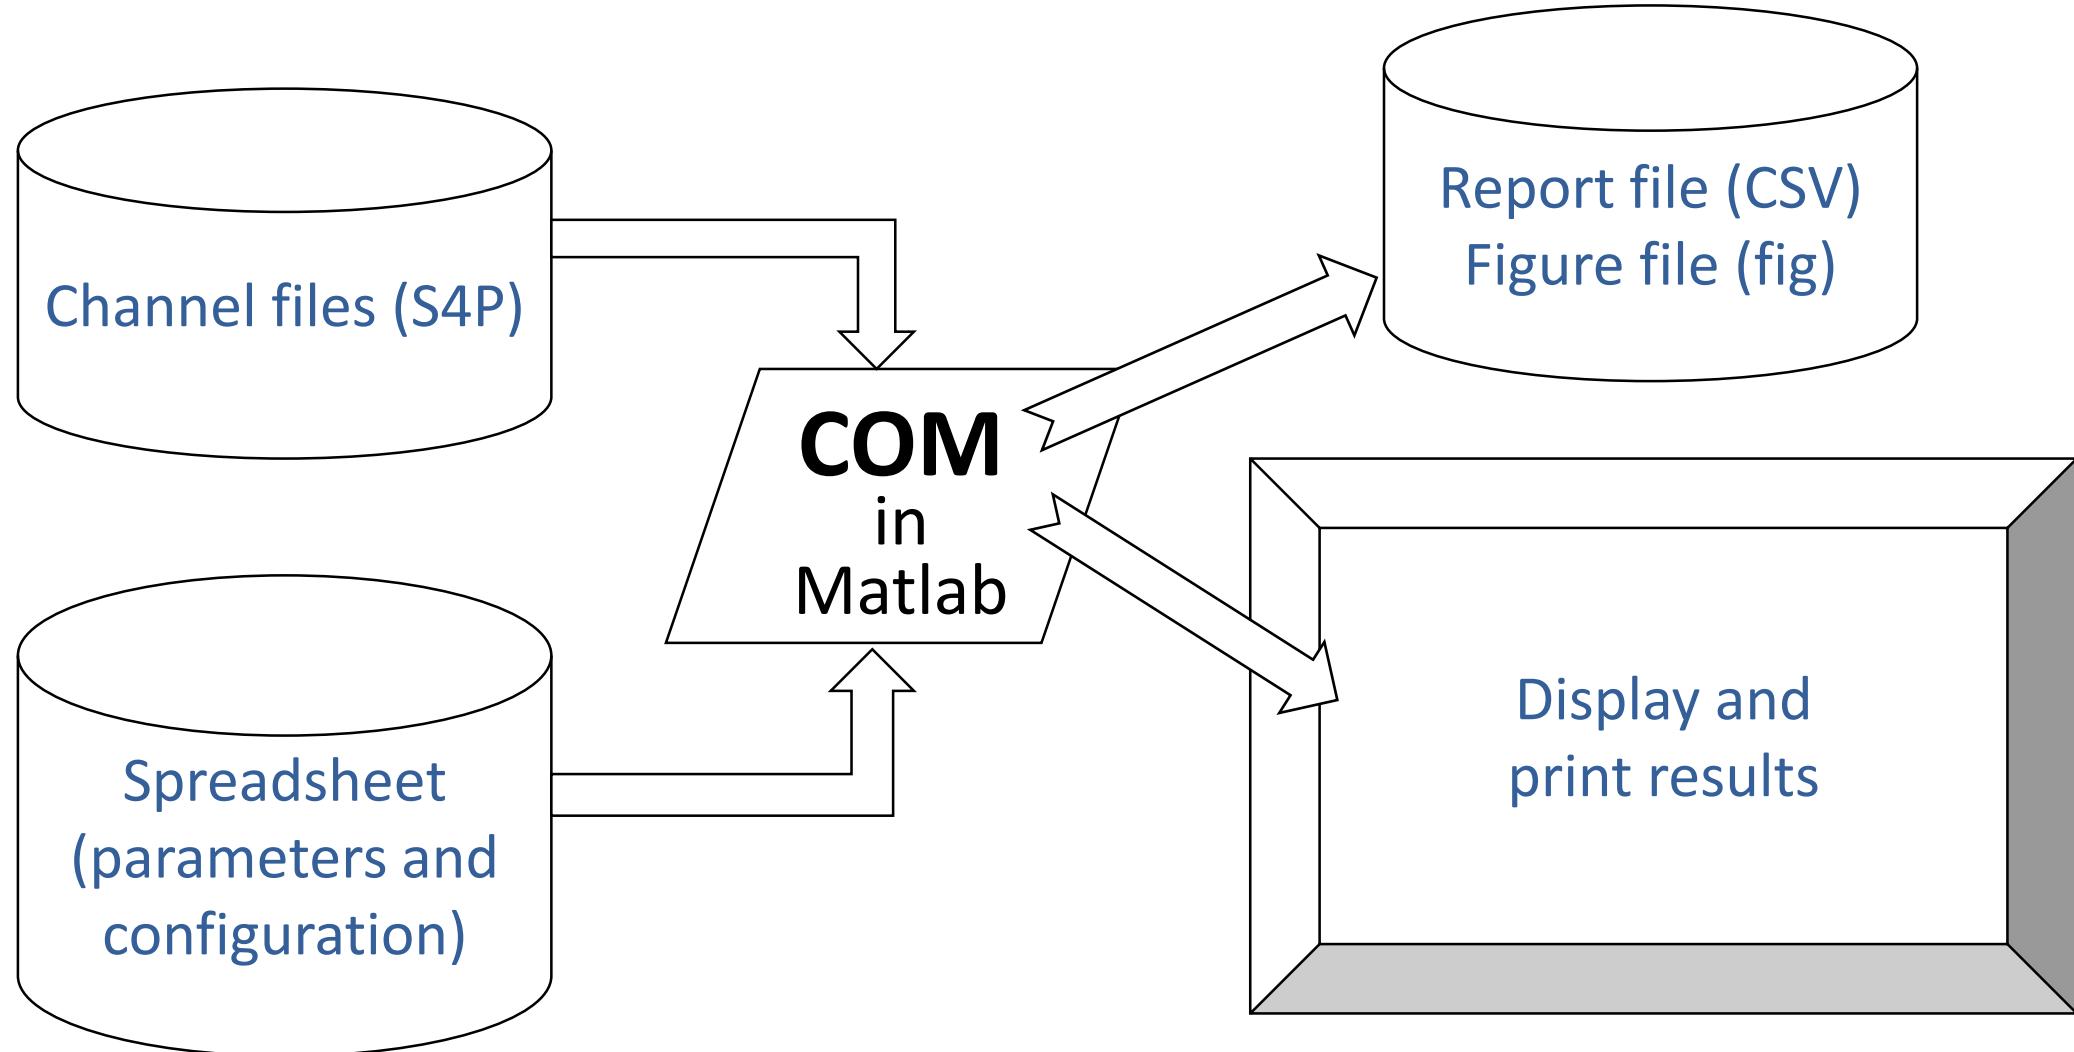

# What You Need to get Started

- A set of s4p S-parameters
  - Called channel files
- COM Matlab® Script
  - r3.1 or higher
- A Configuration Spreadsheet
  - Corresponding to a particular standards

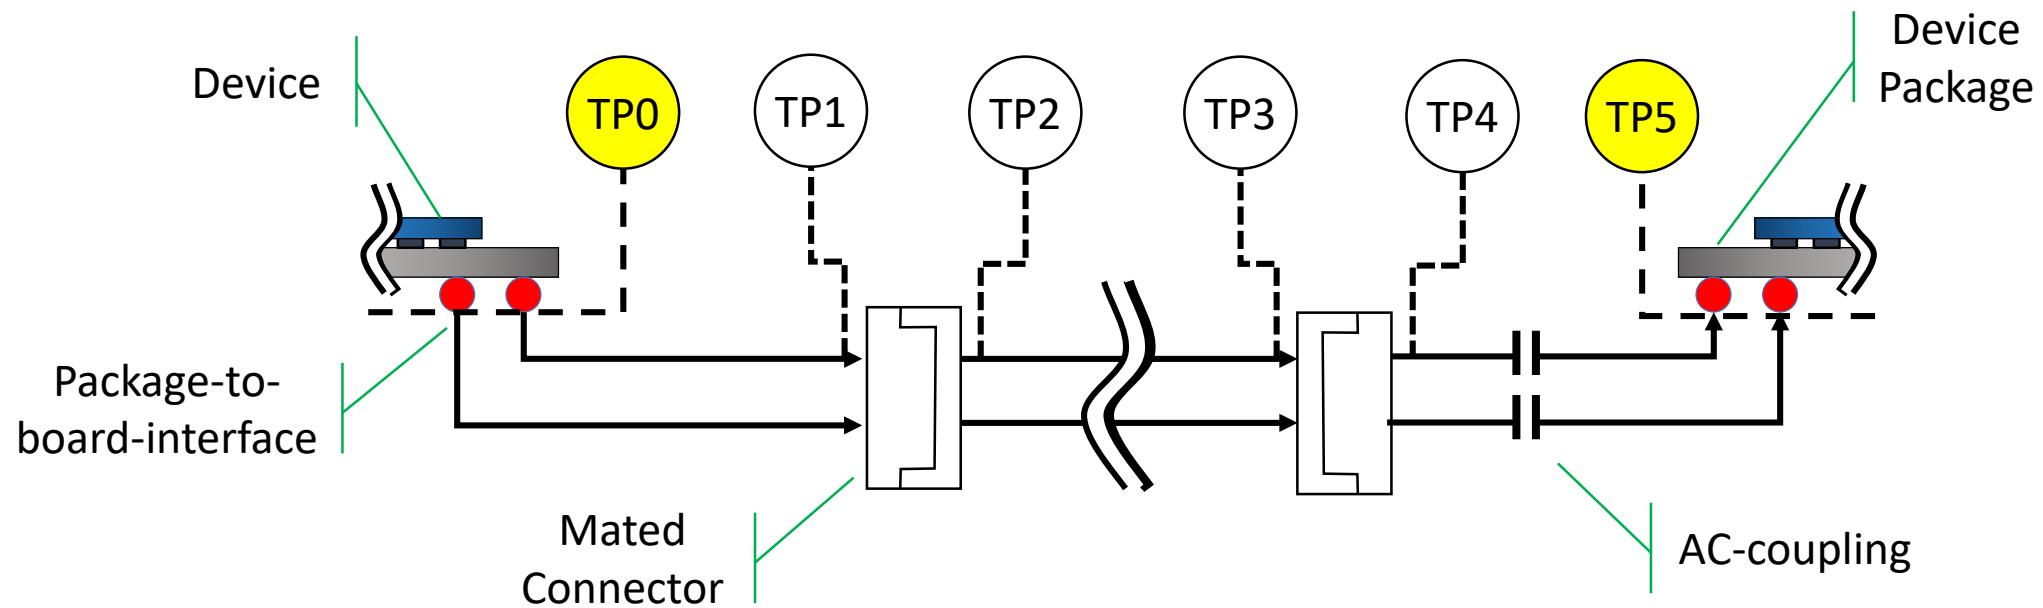

Channel Operating Margin

# Basic Flow

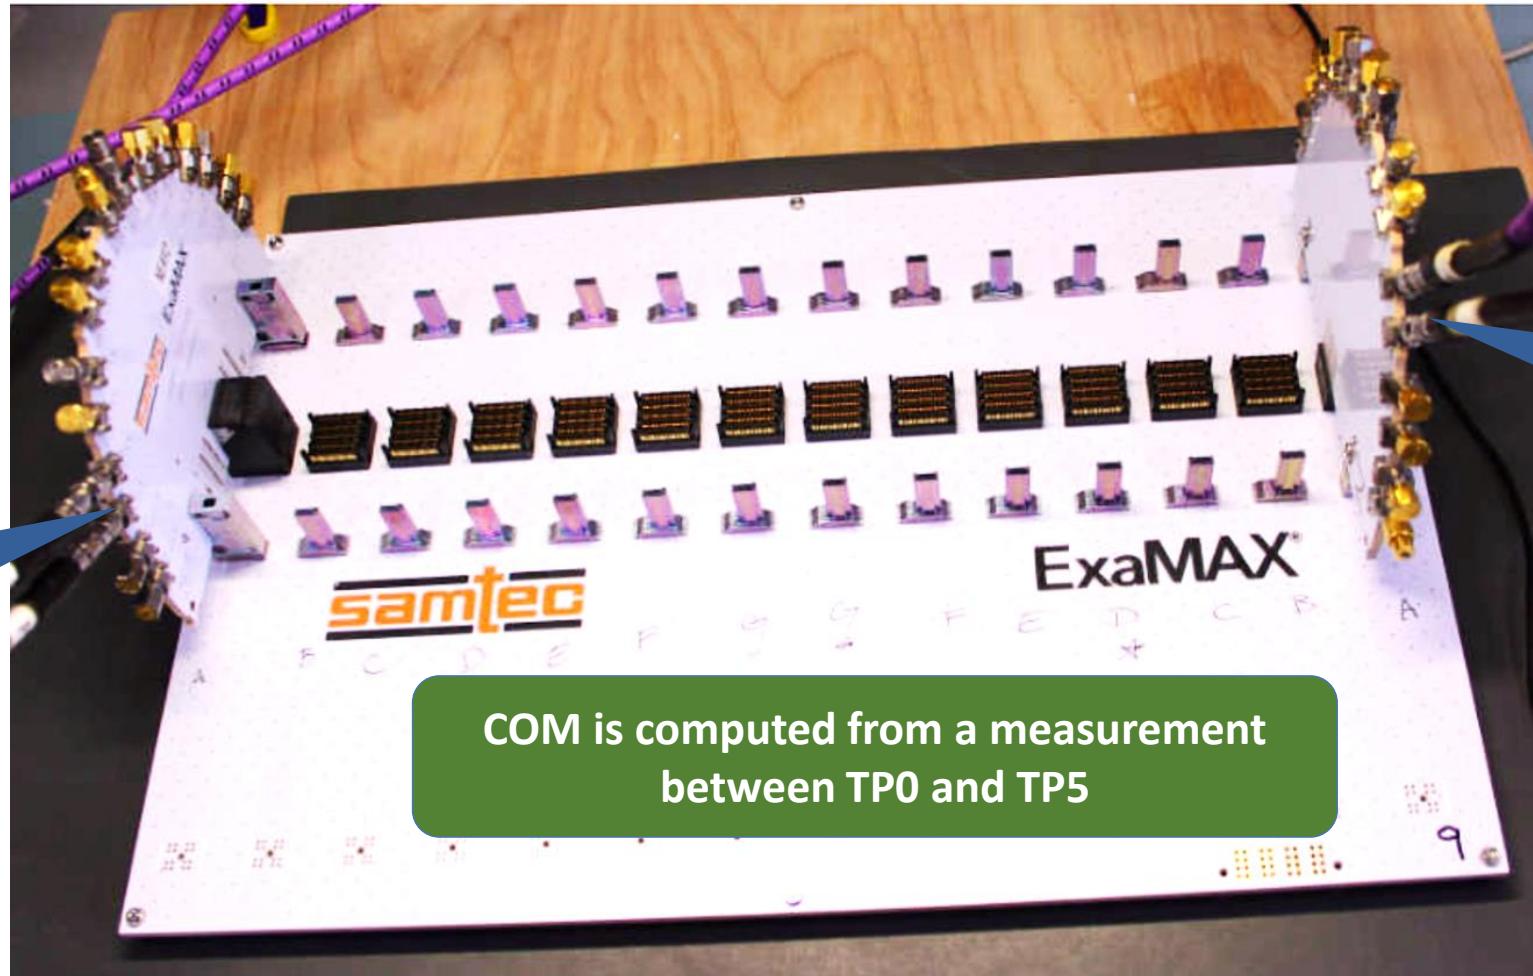

# Channel Model

- COM is computed from differential scattering parameters between tp0 and tp5
  - This is essentially all the interconnect between two chips
- Reference Devices/Packages are mathematically added

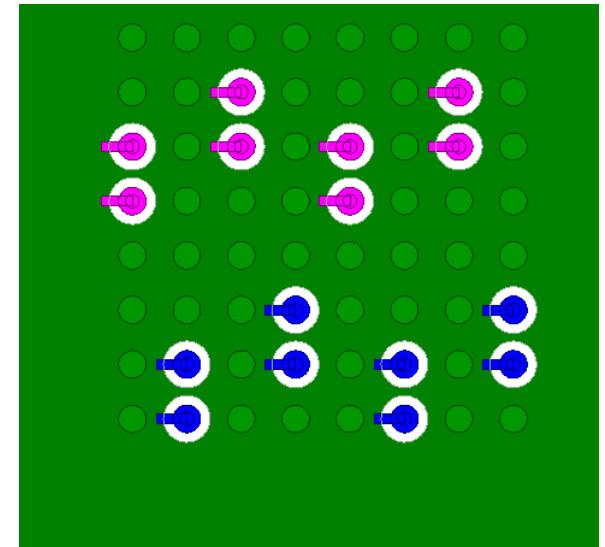

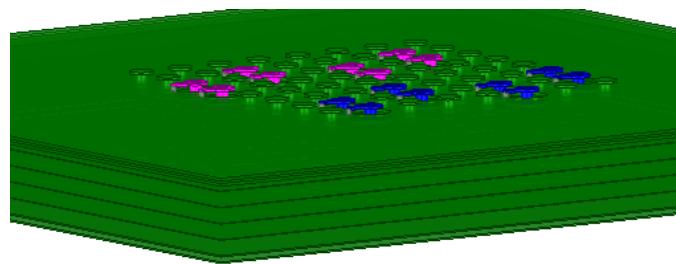

# Measuring a Channel to Compute COM

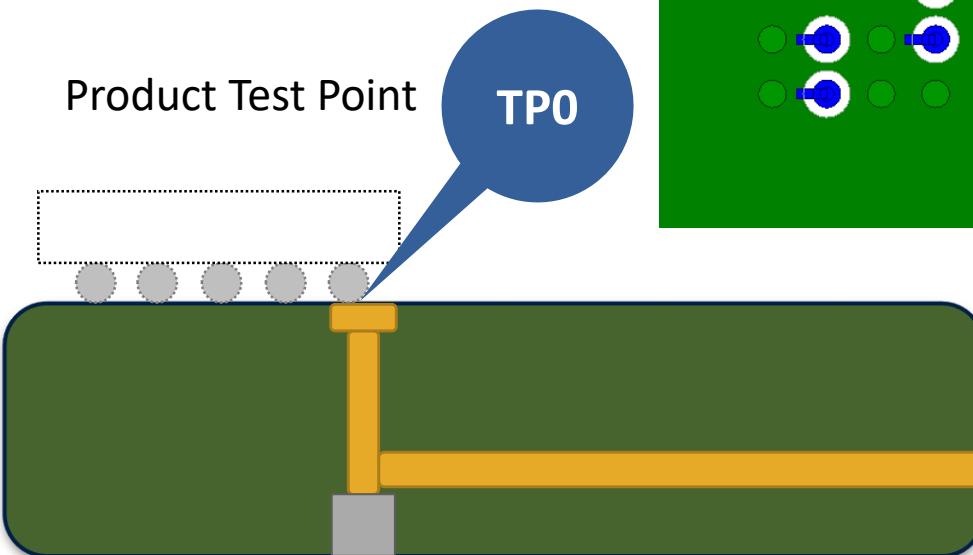

# Test Point (TP) Considerations

Instrumented Test Point

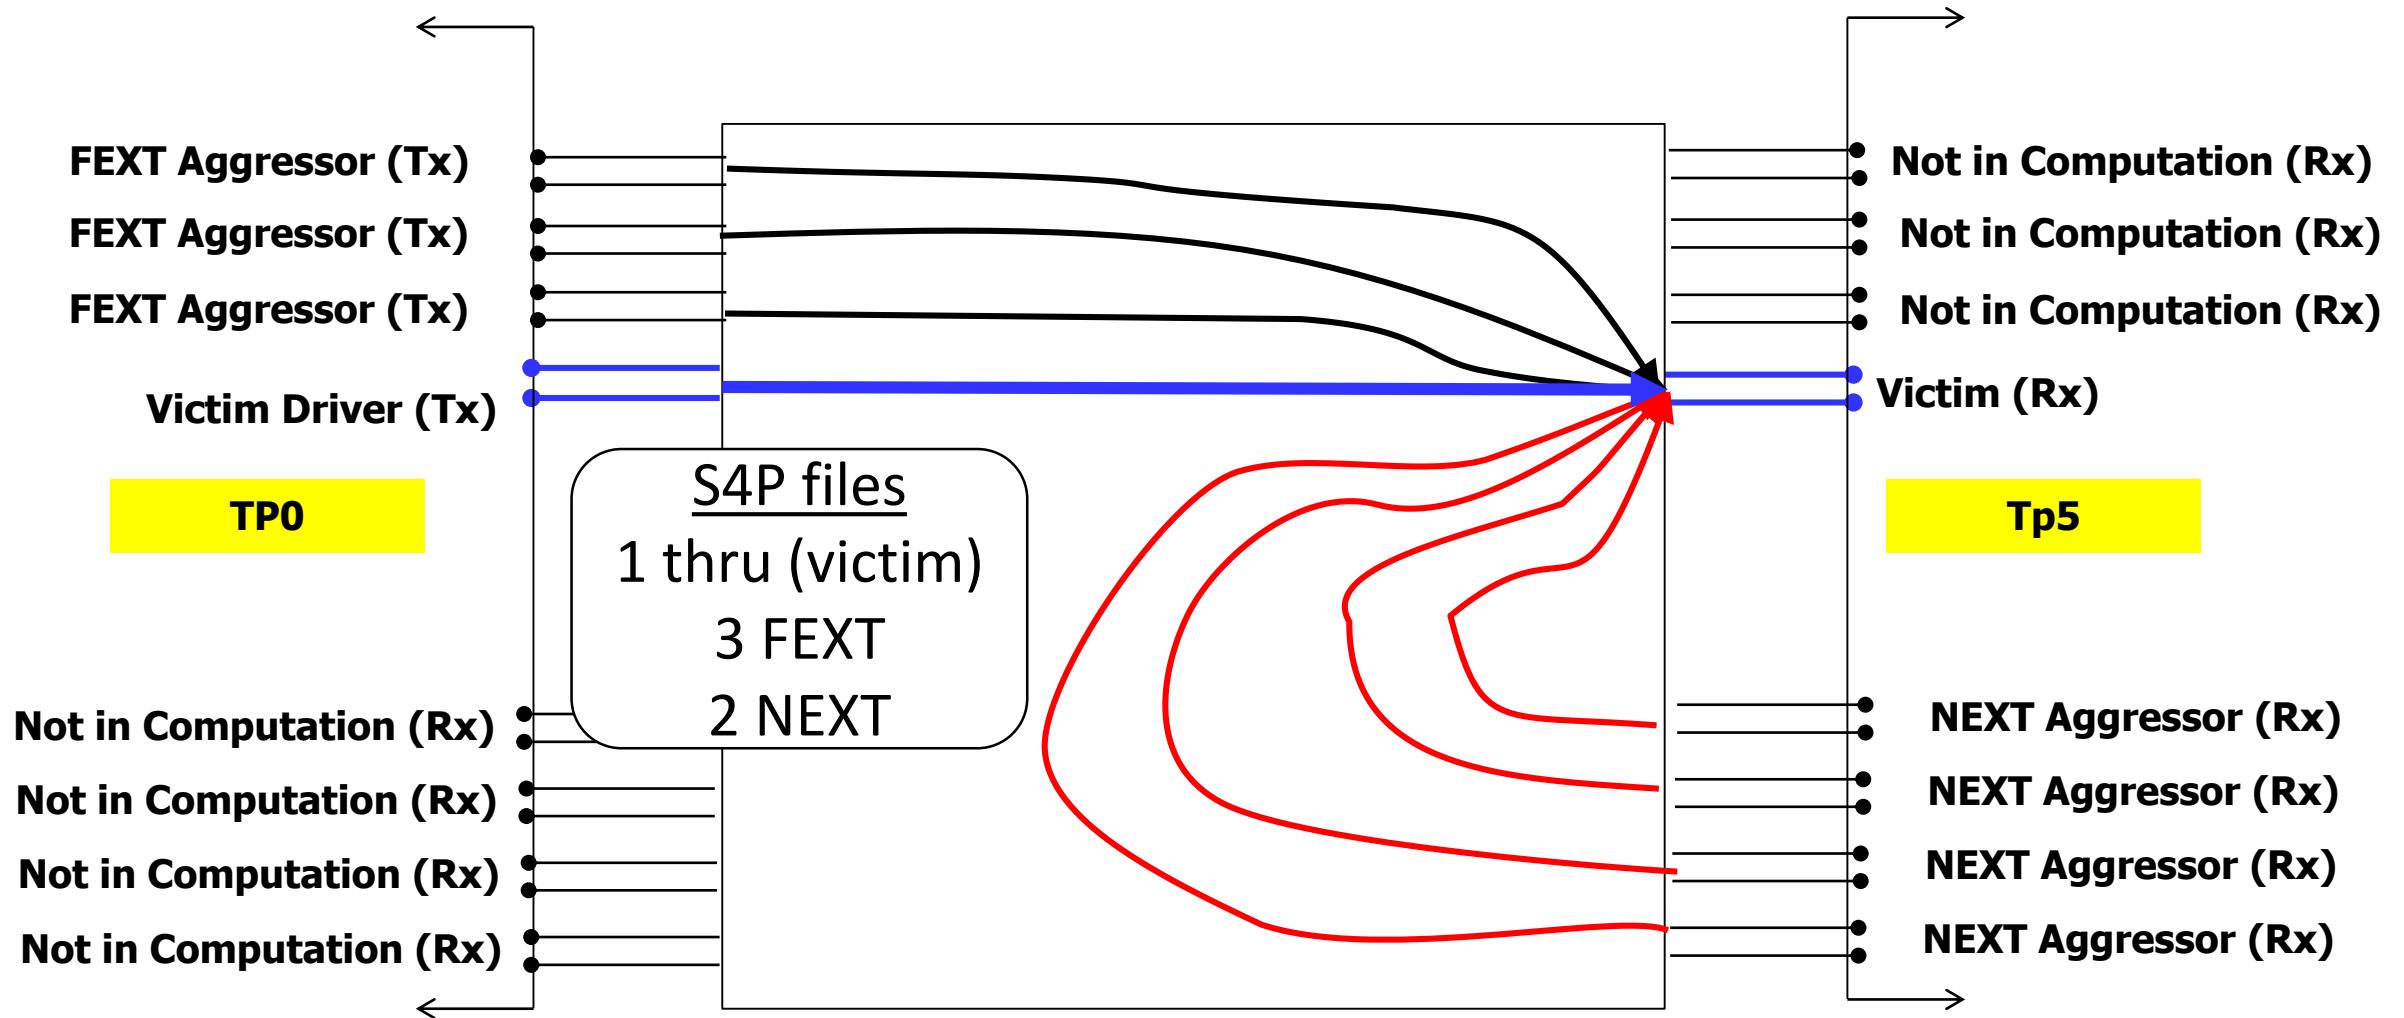

Product Test Point

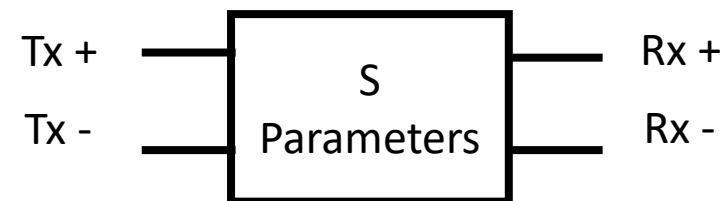

An Instrumented Test Point may be better than the Product Test Point

# 4-Lane Example Measurements

# Basic S-parameter Script Requirements

- Range at least 10 MHz to the Baud rate (2\*Nyquist sampling frequency)
- S4p files are single ended
  - Reference to 50 ohms
- Minimum linear step size is 10 MHz
- 4-port S-parameters specified as [ Tx+ Tx- Rx+ Rx-]
  - Default is [ 1 3 2 4 ]
  - Can specify in spread sheet: Example [ 1 2 3 4 ] or as required

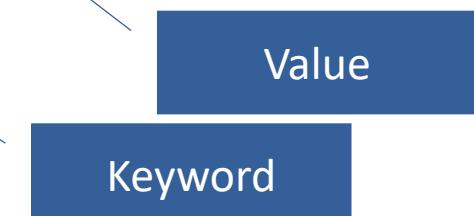

# General Configuration File Rules

- Only the tab “COM\_Settings” is interpreted and used in the COM script
  - .XLS and .XLSX files are permitted
  - All other tabs are ignored and can be used for documentation
- Cells in the configuration file use a keyword/value syntax
- Keywords are text and to the right is a value
  - These two cells are a keyword pairs
  - ☞ Keyword pairs are position insensitive
  - Keyword syntax must be exact
  - All other syntax is treated as comments and ignored
  - The values are usually interpreted as Matlab expressions
- Many of the keywords are parameters, specified in channel standards
- Other keywords are operational control

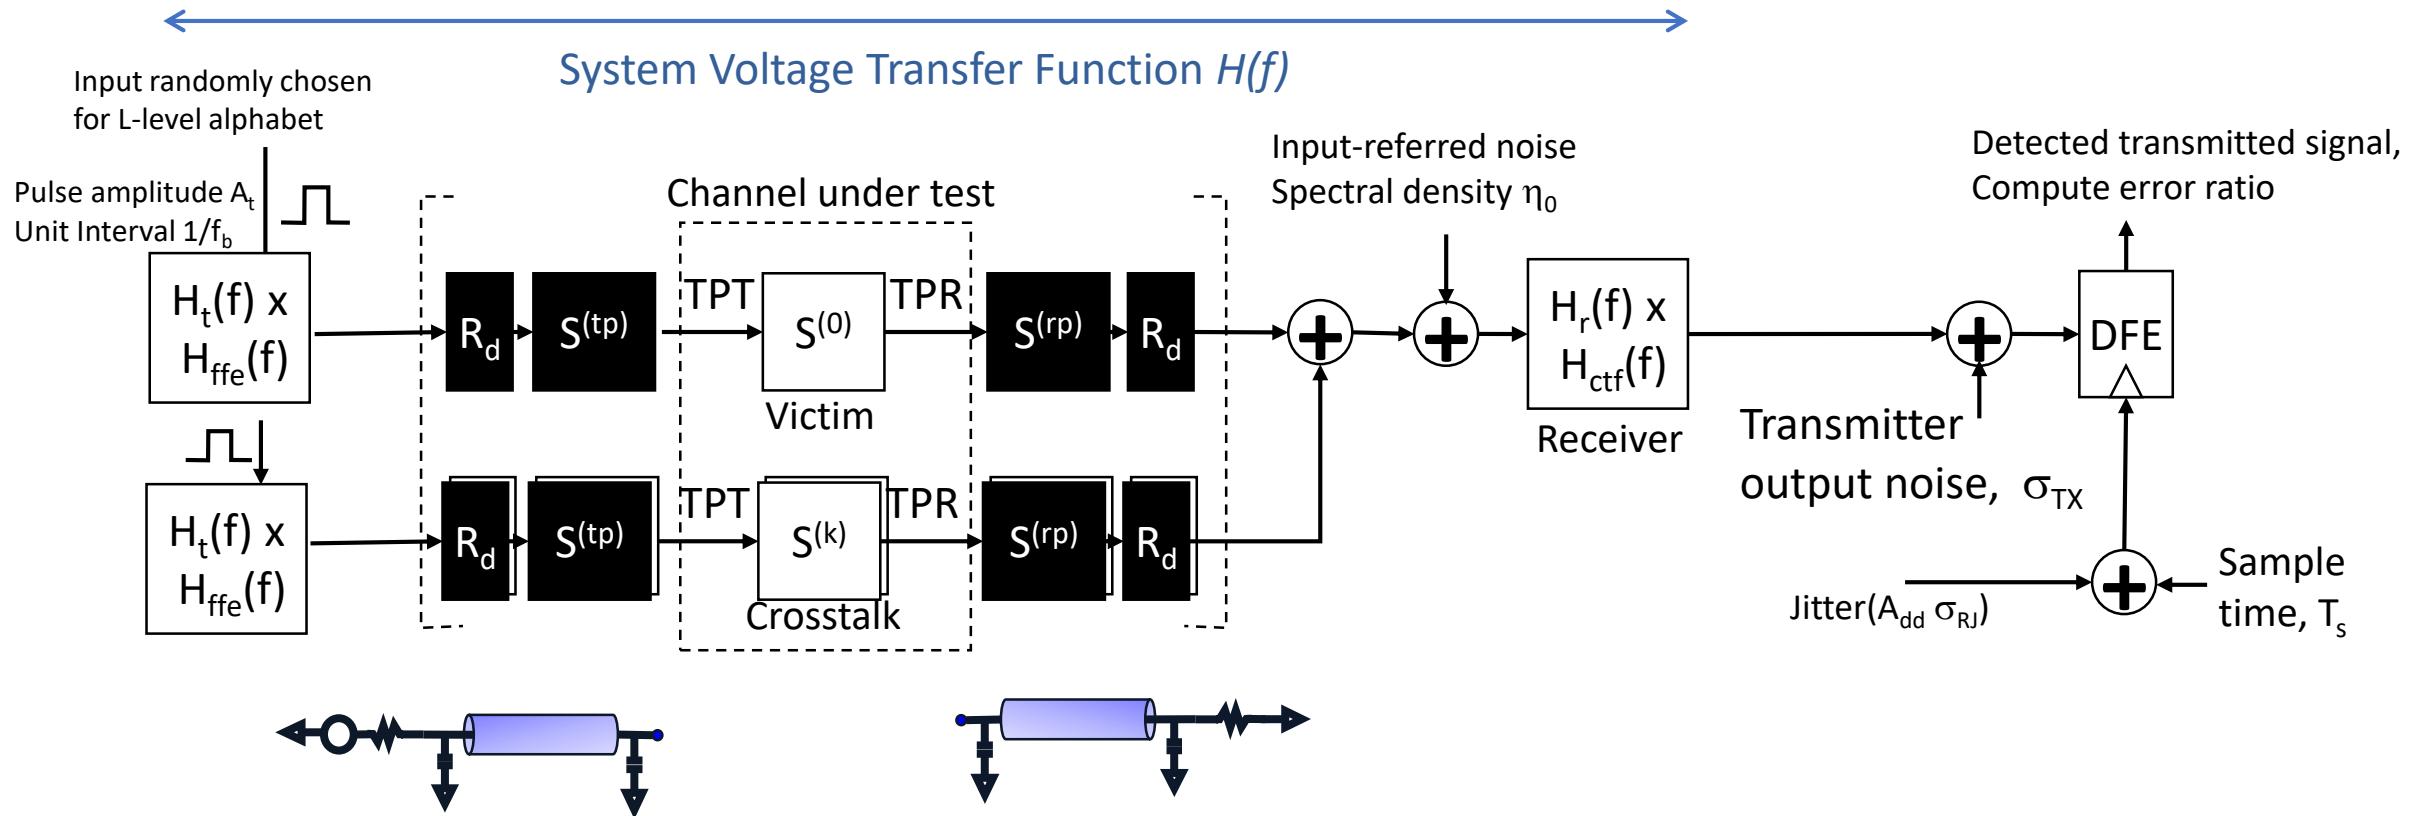

c(-1)	[-0.34:0.02:0]
c(-2)	[0:0.02:0.12]
c(-3)	[ -0.06:0.02: 0]

Parameter	Setting	Units	Information
f_b	25.78125	GBd	

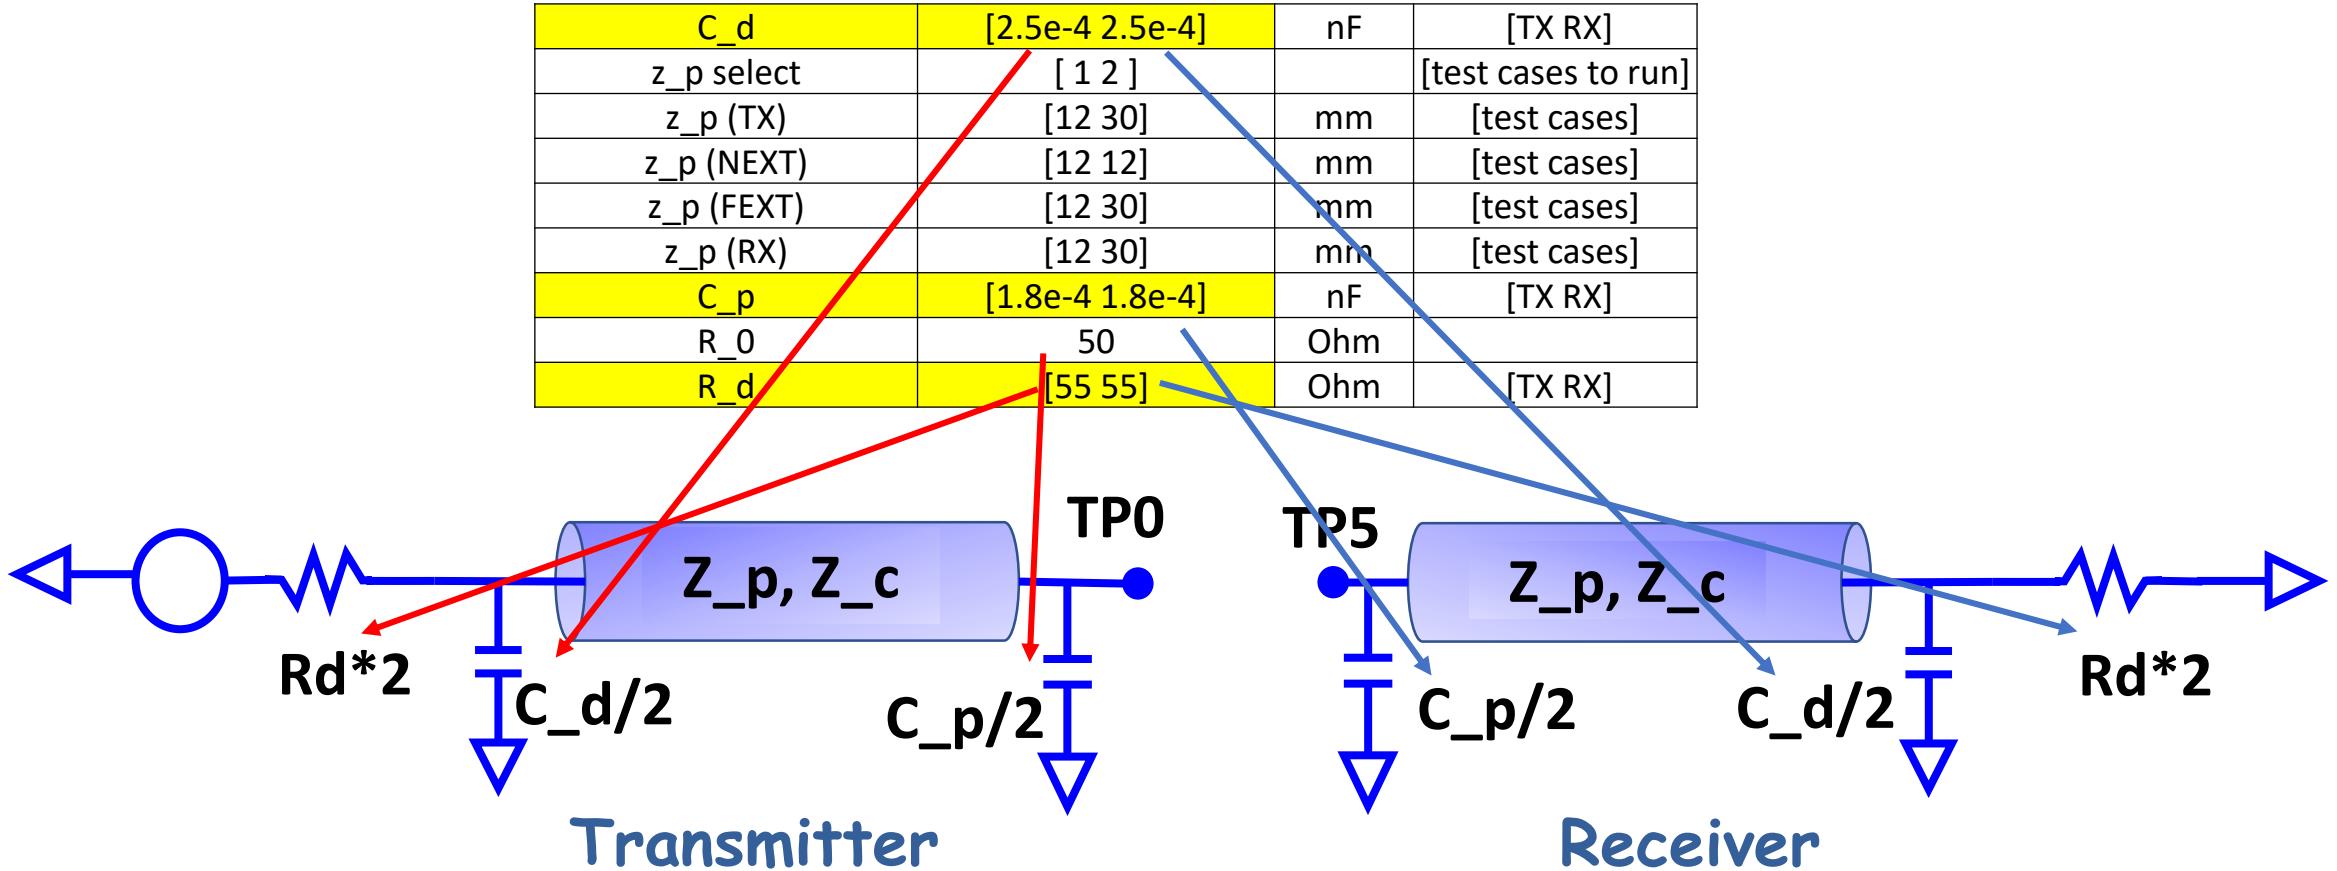

# COM uses Differential S-parameters for Computation

- 4-port s4p channel files are converted into 2-port differential S-parameters
- Packages are cascaded in differential mode

# The Simple Package used for under 56 Gbps

$C_d$	[2.5e-4 2.5e-4]	nF	[TX RX]
$z_p$ select	[ 1 2 ]		[test cases to run]
$z_p$ (TX)	[12 30]	mm	[test cases]
$z_p$ (NEXT)	[12 12]	mm	[test cases]
$z_p$ (FEXT)	[12 30]	mm	[test cases]
$z_p$ (RX)	[12 30]	mm	[test cases]
$C_p$	[1.8e-4 1.8e-4]	nF	[TX RX]
$R_0$	50	Ohm	
$R_d$	[55 55]	Ohm	[TX RX]

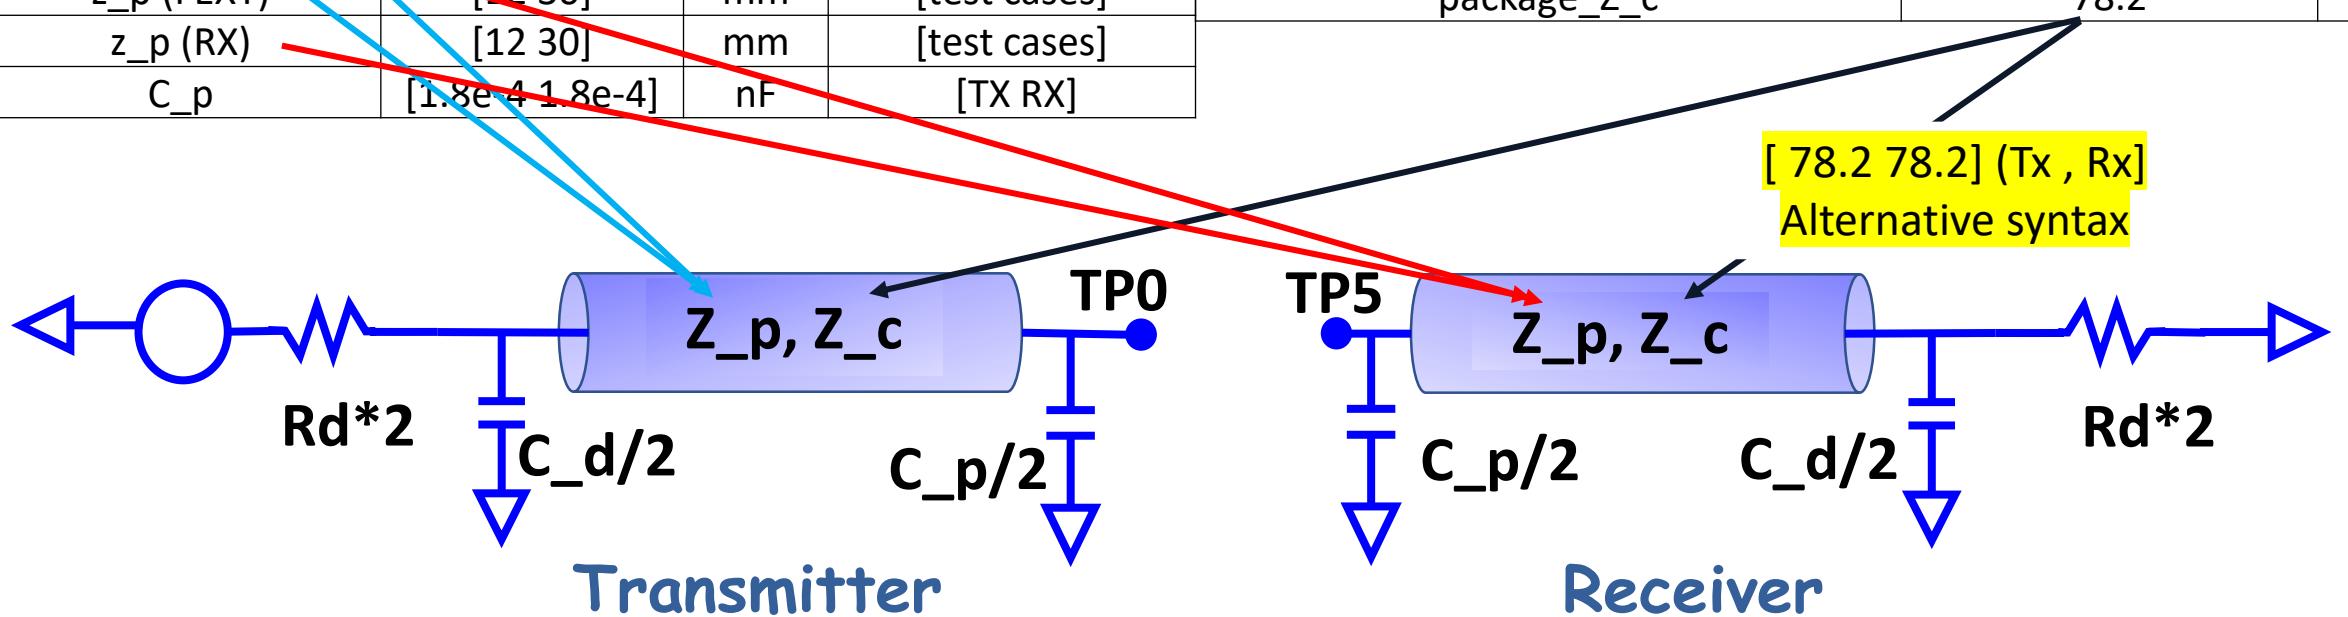

Die load ( $R_d$ ,  $C_d$ ) and package BGA ball/package vertical routing ( $C_p$ ) are specified in the configuration file

# The Simple Package used for under 56 Gbps: Routing

$C_d$	[2.5e-4 2.5e-4]	nF	[TX RX]
$z_p$ select	[1 2]		[test cases to run]
$z_p$ (TX)	[12 30]	mm	[test cases]
$z_p$ (NEXT)	[12 12]	mm	[test cases]
$z_p$ (FEXT)	[12 30]	mm	[test cases]
$z_p$ (RX)	[12 30]	mm	[test cases]
$C_p$	[1.8e-4 1.8e-4]	nF	[TX RX]

Table 93A-2 parameters

Parameter	Setting	Units
package_tl_tau	6.141E-03	ns
package_tl_gamma0_a1_a2	[0 1.734e-3 1.455e-4]	
package_Z_c	78.2	Ohm

Differential package transmission line length and impedance ( $Z_p, Z_c$ ) are specified in the configuration file.  
 $Z_p$  and  $Z_c$  syntax is different

# Test Cases

Table 93A-1 parameters			
Parameter	Setting	Units	Information
f_b	25.78125	GBd	
f_min	0.05	GHz	
Delta_f	0.01	GHz	
C_d	[2.5e-4 2.5e-4]	nF	[TX RX]
z_p select	[ 1 2 ]		[test cases to run]
z_p (TX)	[12 30]	mm	[test cases]
z_p (NEXT)	[12 12]	mm	[test cases]
z_p (FEXT)	[12 30]	mm	[test cases]
z_p (RX)	[12 30]	mm	[test cases]
C_p	[1.8e-4 1.8e-4]	nF	[TX RX]

Table 93A-2 parameters		
Parameter	Setting	Units
package_tl_tau	6.141E-03	ns
package_tl_gamma0_a1_a2	[0 1.734e-3 1.455e-4]	
package_Z_c	78.2	Ohm

- COM runs once for each specified “z\_p\_select”
- z\_p(TX), z\_p(NEXT) , z\_p(FEXT) , z\_p(RX) are length index sections for z\_p\_select
- If “z\_p\_select” is only specified as 2, then COM only runs with the z\_p(TX), z\_p(NEXT), z\_p(FEXT) , z\_p(RX) and 30,12,30, 30 mm
- “z\_p\_select” as [ 2 1 ] is also valid syntax

# Configuration Spreadsheet

- First example is 100 G Base KR4 example
- 25 Gb/s lane (NRZ)

## Syntax:

com\_ieee8023\_93a\_310( {configuration file}, {number of FEXT files}, { number of NEXT files, {through file},  
{FEXT file 1}, ... {FEXT file n}, {NEXT file 1}, ... {NEXT file M}})

{configuration file} string: .xls, .xlsx, .mat configuration file name

{number of FEXT files} integer: number of FEXT files

{number of NEXT files} integer: number of NEXT files

{through file} string: victim channel files (.s4p)

{FEXT file 1}, ... {FEXT file n} **comma separated strings: FEXT channel files (.s4p)**

{NEXT file 1}, ... {NEXT file n} comma separated strings: NEXT channel files (.s4p)

All s4p files must have the same frequency points and port assignments

# Output Control in the Configuration Spreadsheet

<b>DIAGNOSTICS</b>	1 or 0	If set to 1 will cause the outputs to be recorded in a .mat file. Also a few more parameters are recorded
<b>DISPLAY_WINDOW</b>	1 or 0	Turns on (1) and off (0) graphic and display window
<b>CSV_REPORT</b>	1 or 0	If set to 1 will cause the outputs to be recorded in a .CSV file. This contains the same data as in the .mat file
<b>SAVE FIGURES</b>	1 or 0	If set to 1 and DISPLAY_WINDOW is 1 the graphic figures are saved as .fig files in the results directory
<b>SAVE FIGURE_to_CSV</b>	1 or 0	Not recommended set to 0
<b>RESULT_DIR</b>	.\\result\\KP4_{date}	A directory specification for where the reports and figure files are written. There is an optional syntax where the date is preplaced with the “{date}” string.

# Transition Time Syntax Caveats in Early Spreadsheets

- Later version of COM uses “FORCE\_TR” to enable the transition time filter
- The default if not specified is 1. The associated Gaussian 20%-80% transition time is keyword “T\_R”.
  - The unit are nano-seconds
  - Setting T\_r\_filter\_type to 1, T\_r\_meas\_point to 0, and IDEAL\_TX\_TERM to 0 is the equivalent of setting FORCE\_TR to 1. This a quirk for backwards compatibility
- In general, the way IEEE specifies units in the following:
  - if giga is used for frequency, nano is used in other units. I.e. C\_d is specified as nF not F or pF.
- Sometime the units are in terms for the baud rate f\_b. The spreadsheet typically annotates what units are required for the respective keyword.
  - Units must be specified exactly as required

# Between Version of COM

- Spreadsheets are backward compatible
  - New parameter defaults are intended to have no effect on COM, if not specified
- Big changes for 100 Gbps
  - More robust reference package model (covered in presentation)
  - Floating taps
  - Additional pole zero pair for continuous time filters
  - Effective return loss (ERL) and TDR
    - Started with 50 Gbps PAM4
  - Separate parameter for FOM\_ILD and ICN
  - Maximum and minimum DFE tap limits separated
  - AC RMS mode conversion

# 100 Gbps Reference Package Created Syntax Challenges

# 2 Segment with T-coil Emulation Package

## Model Syntax needs to be Precise and Exact
