

POWER/PDN TECH SUPPORT

Power Distribution Network (PDNs) designers must balance increasing supply rails, density, complexity and noise sources with cost constraints and small form factors. Reliability, safety and thermals are also key design concerns. Samtec's team of Power Integrity and thermal experts offer industry leading tech support to simplify the process.

INTERCONNECT SOLUTIONS

Full Line of Ultra Micro, High Power and Power/Signal Interconnect Solutions

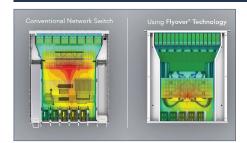

Define & Implement System Interconnects for Application-Specific Power Solutions

Immersion Cooling Testing and Product Qualification

FULL SYSTEM DESIGN SUPPORT

Advocate System Power Architectures and Design Solutions

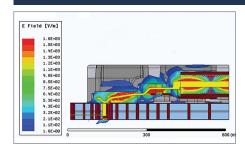

Reference Routing Development for Application-Specific Solutions

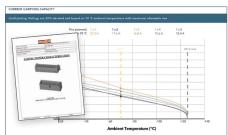

Safety and Reliability Design Assurance

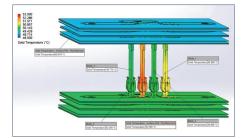

MODELING, SIMULATION & TESTING SERVICES

Power Delivery Modeling, Simulation, Characterization and Optimization of the PDN

Power Integrity Characterization Test Reports (IR, DWV, CCC, etc.)

Thermal Modeling, Simulation and Analysis of Systems, Components and Sub-Components
